PROJECTS

Email Spam Detection Using Machine Learning
(11/2022 - 02/2023) [🔗](#)

- Leveraged Support Vector Machine, Logistic Regression, and Naive Bayes theorem to engineer a robust email classification model precisely identifying spam and ham emails.

Diabetes Prediction Using Machine Learning
(03/2023 - 06/2023) [🔗](#)

- Implemented and evaluated machine learning models including Random Forest, Decision Tree, and Support Vector Machine (SVM)
- This model accurately gauges the likelihood of an individual having diabetes based on vital health features like glucose levels and blood pressure.

Student Information Management System

- Developed a web-based system using Java, JSP, and MySQL for managing student records.
- Implemented secure user authentication and integrated HTML/CSS for a user-friendly interface
- Designed efficient database operations using the DAO pattern for data integrity.
